NAME

ovs-tcpundump - convert "tcpdump -xx" output to hex strings

SYNOPSIS

```
 \begin{aligned} & \textbf{ovs-tcpundump} < \textit{file} \\ & \textbf{Common options:} \\ & & [-\textbf{h} \mid --\textbf{help}] \ [-\textbf{V} \mid --\textbf{version}] \end{aligned}
```

DESCRIPTION

The **ovs-tcpundump** program reads **tcpdump** -**xx** output on stdin, looking for hexadecimal packet data, and dumps each Ethernet as a single hexadecimal string on stdout. This format is suitable for use with the **ofproto/trace** command supported by **ovs-vswitchd**(8) via **ovs-appctl**(8).

At least two $-\mathbf{x}$ or $-\mathbf{X}$ options must be given, otherwise the output will omit the Ethernet header, which prevents the output from being using with **ofproto/trace**.

OPTIONS

- –h
- --help Prints a brief help message to the console.
- $-\mathbf{V}$
- --version

Prints version information to the console.
