NAME

ovn−detrace – convert ''ovs−appctl ofproto/trace'' output to combine OVN logical flow information.

SYNOPSIS

ovn−detrace < *file*

Common options:

[**−h** | **−−help**] [**−V** | **−−version**]

DESCRIPTION

The **ovn−detrace** program reads **ovs−appctl ofproto/trace** output on stdin, looking for flow cookies, and expand each cookie with corresponding OVN logical flows. It expands logical flow further with the north-bound information e.g. the ACL that generated the logical flow, when relevant.

OPTIONS

−h

−−help Prints a brief help message to the console.

−V

−−version

Prints version information to the console.

−−ovnsb=*server*

The OVN Southbound DB remote to contact. If the **OVN_SB_DB** environment variable is set, its value is used as the default. Otherwise, the default is **unix:/usr/local/var/run/open-vswitch/ovnsb_db.sock**, but this default is unlikely to be useful outside of single-machine OVN test environments.

−−ovnnb=*server*

The OVN Northbound DB remote to contact. If the **OVN_NB_DB** environment variable is set, its value is used as the default. Otherwise, the default is **unix:/usr/local/var/run/open-vswitch/ovnnb_db.sock**, but this default is unlikely to be useful outside of single-machine OVN test environments.
