NAME

>ovs−parse−backtrace − parses ovs-appctl backtrace output

SYNOPSIS

>**ovs−appctl backtrace | ovs−parse−backtrace** [*binary*]

>**ovs−parse−backtrace** [*binary*] **<** *backtrace*

DESCRIPTION

>In some configurations, many Open vSwitch daemons can produce a series of backtraces using the **ovs−appctl backtrace** command. Users can analyze these backtraces to figure out what the given Open vSwitch daemon may be spending most of its time doing. **ovs−parse−backtrace** makes this output easier to interpret.

>The **ovs−appctl backtrace** output must be supplied on standard input. The binary that produced the output should be supplied as the sole non-option argument. For best results, the binary should have debug symbols.

OPTIONS

>**−−help** Prints a usage message and exits.

>**−−version** Prints the version and exits.
